CONGRESS PROPOSES ELIMINATING TAX BENEFIT FOR DONATING LAND

A recent report of Congress’s Joint Committee on Taxation (the committee that reconciles any differences between the Senate and House versions of the budget bill) has recommended eliminating tax deductions for landowners who volunteer to conserve their land through donation. This program has been in place for more than 25 years and is critical to private and public conservation efforts. It has led to conservation of more than 34 million acres of agricultural lands, forests, wildlife habitats, historic landscapes, and parklands.

Currently, landowners who are willing to protect important resources on their property can donate their land or sell it for less than its value and qualify for a tax deduction for the donated value or value reduction. They can also donate a conservation easement, which protects the resources forever, but allows families to continue to live on and farm the land, and pass on the property to their heirs. They receive a tax deduction for the value of the development rights they give up.

The Joint Committee proposal includes:

- Limiting deductions to the price the landowner originally paid for the property (their “basis”), rather than its market value
- Allowing the donor to deduct only 1/3 the value of their conservation easement donation
- Forbidding any deduction for donating an easement if the landowner continues to live on the land.

Given the offers that developers will make for land on which to build, these proposals would effectively eliminate nearly all land and easement donations. Without incentives, land trusts and municipalities would have to preserve land through direct acquisition at full value – the most expensive method of preservation.

The primary reason that these proposals were put forth is that there have been some abuses of existing conservation easement laws resulting in improper tax deductions. But, instead of identifying abusers or modifying the laws to prevent abuse, the proposals destroy private, voluntary conservation totally. That’s throwing the baby out with the bathwater!

[This article is based on a Fact sheet issued by the Lands Trust Alliance.]

WHAT YOU CAN DO
1) Contact your US Senators and Representatives via telephone, fax or email. www.congress.org
2) Alert friends and colleagues in key Congressional members’ districts about the issue. To see a list and sample letter go to www.lta.org/publicpolicy/ppc_letter.htm.

Gardening for Wildlife
The workshop was a great success. We would like to thank our speakers Jill Taylor, Scotland Run Naturalist, Lorraine Keifer, Triple Oaks Nursery owner, John DiOrio, Heislerville Nursery, and Jane Nogaki, of the NJ Environmental Federation.

For a list of nurseries (links, addresses & phone #’s) that support the Federation go to www.sjwatersheds.org/contributors/nurseries.htm

To attract wildlife in your backyard:
- Provide food (plants), water & shelter
- Use native plants – they will do better and require less water
- Allow a portion of your lawn to grow – see what naturally comes up

The mission of the Federation is to promote the preservation and protection of water resources within the watersheds of Gloucester County and adjoining areas. This is accomplished through education, advocacy, and land preservation.

The South Jersey Land Trust works to preserve significant areas of open space and natural resources in Southern New Jersey. Through direct acquisition, conservation easements, conservation planning assistance, promotion of ecotourism, and land preservation education.
LEGISLATION UPDATE

UPDATE ON FAST TRACK LEGISLATION - By Suzanne McCarthy

A grassroots effort to repeal the New Jersey Fast Track legislation that passed last summer is underway and is gaining adherents. To date, 34 municipalities, 44 state legislators, and numerous environmental and other organizations (including the Federation) have signed on to the repeal effort. Towns have passed resolutions opposing Fast Track, legislators have signed onto the repeal bill (S-2157), and organizations have added their names to letters and petitions.

This legislation to streamline state permits for projects located in urban and suburban areas is considered by many to be one of the worst environmental laws ever passed. Its intention was to reduce the time for review and issuance of certain environmental and other permits in designated “smart growth” areas, to facilitate development where growth is desired. Unfortunately, one of its main provisions allows for automatic approvals, if permit review is not completed within 45 days. This unreasonably short time period undermines protection of public health and the environment. It also restricts public input, weakens home rule authority in planning decisions, and may violate federal statutes.

Proposals to amend the existing law have been put forward, but those signing on to the repeal effort feel that the legislation is too flawed. Perhaps new legislation will allow for a public debate of the issues being addressed. That’s something that didn’t happen last summer when the Fast Track law was rushed through the legislature in a matter of days.

OLDMAN'S CREEK ROAD AND STREAM CLEANUP

The Road and Stream clean up on the Oldman’s Creek/Pedricktown Marsh was a great success. A total of 30 volunteers (adults and children) met at the parking lot on Pedricktown-Center Square Road next to Oldman’s Creek on Sat April 9th at 9AM and worked very hard collecting a variety of items. Thanks to all who participated!

Final Count

34 bags of recyclables
32 bags of trash
62 tires
miscellaneous metal & plastic items including: washing machine, street signs, welding tank, old truck engine head, basket ball ring stand, a battery and a door

Stan Hershey, event coordinator, stands with pile of trash, recyclables, and tires
MANY HANDS LIGHTEN THE LOAD - Rich Thomas

Every day, across the United States, countless numbers of people from all walks of life — as individuals or in groups — spend hours in service to others. Volunteering is, for some, a way of returning to the community some benefit received. For others, it is an ineffable experience that makes the volunteer “feel good.” And for still others, it can be a transforming experience — changing one’s perspective on people, on community and on society.

During the last year, the Federation has placed a strong emphasis on increasing our membership, with excellent results. Since you are getting a copy of this newsletter you are possibly a new member and we are reaching out especially to you to share your skills & knowledge to make our organization stronger. In the year 2005 we will continue our current focus and be moving into some new areas. **We need your assistance to continue the Federation’s success.**

Again this year a key will be our presence with a display booth at community days to spread the word on the environment and the critical protection of our shrinking resources of water and land. It would be a great help to have members assisting at the booth at their own community day. You know the area well, which can be a large advantage when discussing protection of resources with community members. You would not be alone; there would always be a seasoned member of the organization with you to teach you the ropes.

Do you have a **craft or hobby** that you would share with people as a program or at an event table? At a recent event we had a person who made birdhouses out of old political signs and some nails. What an attraction for both children and parents alike!

Is there a **talent for fundraising** or do you have a **business connection** to share? We are about to embark on a major donor program reaching out to the community and visiting major businesses. We need contacts as well as people willing to explain our goals and objectives to a business. Again you would not be alone. We always work in teams.

Do you have skills with a camera, to help with rolling out our Municipal Stormwater Assistance program? Do you have accounting skills, handy man skills, or other basic skills that you will share? Please consider sharing your time, energy, and talents.

A FAREWELL AND THANK YOU TO PAUL GREGER

Gloucester County is losing Paul Greger, Federation Board member since 1998, Project Engineer for the South Jersey Land Trust, and valued member of the Washington Township Environmental Commission. Paul is moving to Pennsylvania, so he won’t be out of our reach, but his many skills and high level of service will be greatly missed in this area. In honor of all his contributions, including organization of its Earth Day event each year, Washington Township presented Paul with a Proclamation of Recognition at both the April 25 Earth Day event and at the subsequent Town Council meeting. The Federation was pleased to be part of the Earth Day celebration and added its own Special Recognition gift and words of praise. As “engineer extraordinaire,” imaginative thinker, and ardent conservationist, Paul’s guidance and hard work have been invaluable to the Federation and to all our communities!

FEATURED CREATURE

OPOSSUM

The opossum is the only marsupial mammal in North America. Marsupials are animals whose young is born at a “premature” stage and finish their development within the mother’s marsupium (pouch) where they fasten onto a nipple and nurse. For opossums, this developmental stage is between 2 and 3 months long and there can be as many as 13 babies. Once they leave the pouch, the young travel on the mother’s back. These animals travel alone and are usually slow moving. When frightened and unable to flee they fall into a shock-like state (“playing possum.”) While the opossum is often depicted as hanging from a tree by its tail, it rarely does this. It uses its prehensile tail to stabilize its body while climbing. Few opossums live beyond 1 year, though they can live up to 10 years in captivity. Motorists and many animal predators including dogs, cats, and owls kill them.

HAVE YOU RENEWED YOUR MEMBERSHIP?

Federation of Gloucester County Watersheds

- New Member - Basic - $15
- Renewal - $35
- Sponsor - $100
- I would like to volunteer

Send this form along with your check to:
